"Things Have A Way of Working Themselves Out"

Volume 25, Number 3

Liz, Maggie Create Haynes Sister Tribute Act "Lord Help The Mister, That Comes Between Me and My Seriously Significantly Older Sister"

(Pine Tree) Following months of Broadway speculation, **Margaret Sears** and **Elizabeth Sears-McGrory** have announced their new two-woman show: The Haynes Sisters. Based on the comely sister characters in "White Christmas," the two have put together a theatrical tribute to the blondish gal singers who won the hearts of many returning war veterans who had the ability to travel to Vermont on a moment's notice.

"This red velvet wrinkles too damn fast," said Liz after the closing number run-through, "but at least we have our holiday shows booked." Their agent, **Mike Dapper**, was over the holidays. "This feel-good show is perfect for the adults in the family," said the wily gray-haired pro, "and if Maggie keeps her best charm school persona front and center, we may be able to make a few bucks on this deal."

Maggie Sears kept her comments brief but pointed out that the majority of the stains on her white holiday frock were "likely salsa based" and the whole batwing incident was "only partially her fault." After photos and autographs, the gals turned towards the lodge in unison and said, "Count your blessings instead of sheep."

Miracle Hair Refuses Turning To Gray Michele Lenz-Noll Continues to Stump International Hair Scientists with Still-Raven Locks

(Geneva) Scientists from around the world have assembled to study Michele Lenz-Noll's scalp and follicle structure to attempt to solve the mystery of her still raven-like locks. As her actual date of birth has been sealed by several court orders, the Swiss scientists have concluded her youthful looks combined with an absence of gray hair results in her being a "scientific wunderbabe."

Scientist **Ginger Schnackenberg** (below) stated, "Every one of her hair samples had uniform, dark rich coloring, consistent with a mature teen-ager from a rural area."

She continued, "We were excited when a large gray hair was found embedded in the sample. But it was determined it was from the upper back of her

husband, **Dave**, and inadvertently fell into one of the collection snares during one of their raucous Twister® or Jenga® parties." The research is now focused on her adolescent lifestyle. "All this chick ate as a teenager was turtle meat and a few jalapenos," said Ginger. "So we are going to take a few swabs from her mother and see what shakes out on the old genome analysis machine."

SARAH BARNETT, BLONDE DETECTIVE
